

Returning Raj Kishan's smile

Raj Kishan Kumar Yadav was born with a cleft lip. His parents, Rajendra and Punam Yadav, were unaware that his condition could be treated. It wasn't until a Community-Based Rehabilitation Facilitator (CBRF), Mrs. Shweta Shah, conducted a home visit on 28th Mangsir 2078, that they learned about corrective surgery options.

Despite initial resistance from Raj Kishan's parents, who saw no feeding difficulties, Mrs. Shah provided ongoing counseling. After several follow-ups, they eventually agreed to pursue treatment. Coordination was made with Hamro Hospital, and on 11th Poush 2079, Raj Kishan underwent successful surgery to correct his cleft lip.

His mother expressed immense happiness, noting how beautiful her son looks now and how the surgery left no visible scar. Grateful for the support from the Disability Prevention and Rehabilitation Program (DPRP), the family feels overjoyed with the transformation in their son's appearance.
