

Learning my first words

Sarad Mudiary from Kathari-7, was born with a cleft lip and palate at Thalaha Birthing Center. His parents were shocked by the news, but the nursing staff immediately stepped in, offering counseling and support. Sarad struggled with feeding, and a home visit by the CBRF confirmed his difficulties. Though surgery was suggested, Sarad's low weight delayed the process.

In Ashoj 2079 B.S., after coordination with Smile Train and B&B Hospital, Sarad finally underwent successful surgery. His recovery was tough, but his parents' dedication and the medical team's guidance helped him heal. Now, Sarad is learning to say "Mama" and "Papa" and is almost ready for his next hospital visit once he reaches 10 kg.

The Mudiary family is deeply grateful to Kathari Municipality, DPRP (program), and the entire medical team for their unwavering support. Sarad's journey, though challenging, has been made easier thanks to their care and intervention.
